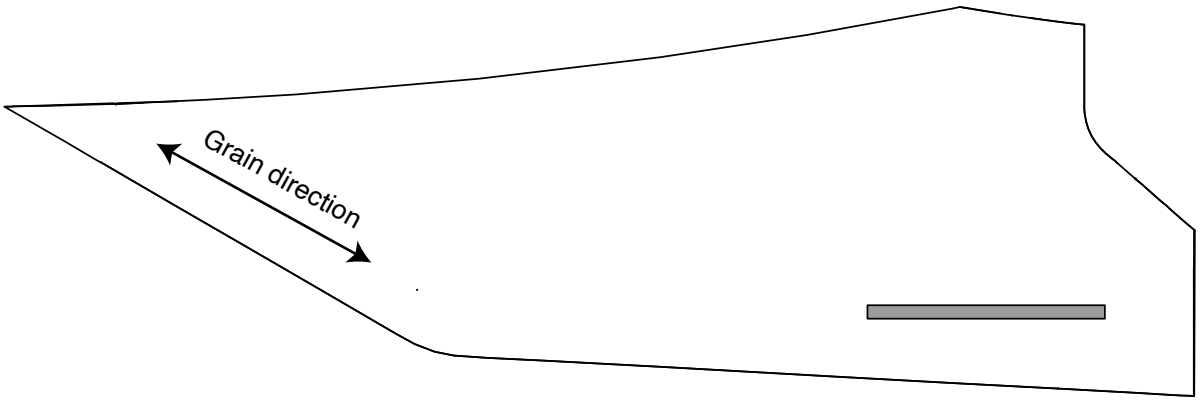
Corrected Fin Template for Estes 1/25 Scale V-2

To use, position this template over fin from kit and trim outboard edge. Chain drive details may be added at position shown on template. **Additional nose weight may be required to ensure flight stability!**



Optional Chain Drive Cover Details

To install the optional chain drive cover details, cut out the shaded area on each of the four fins supplied with the kit. Using the pattern to the right, cut out the four chain drive cover details from 3/32"-thick basswood. The chain drive cover details are designed to fit into the opening on each fin, protruding equally from each side of the fin. After refining the fit of the chain drive cover parts into the opening on each fin, glue the part in place with your choice of adhesive.
